

Diseases: Heart, Diabetes, and Blood Pressure

Heart Disease

Heart disease affects the heart and blood vessels. The heart pumps blood throughout your body.

Main causes: smoking, obesity, high cholesterol, stress, and family history.

Symptoms: chest pain, shortness of breath, fatigue, irregular heartbeat, dizziness.

Prevention: reduce salt and fat, exercise regularly, avoid smoking and alcohol.

Diabetes

Diabetes is a chronic disease when blood sugar is too high. The body needs insulin to control sugar levels.

Two main types: Type 1 (needs insulin from start) and Type 2 (from obesity and inactivity).

Symptoms: excessive thirst, frequent urination, fatigue, constant hunger, blurred vision.

Treatment: healthy diet without excess sugar, exercise, maintain healthy weight.

High Blood Pressure

High blood pressure means the force of blood on vessel walls is too high.

Causes: excess salt, stress, anxiety, obesity, inactivity, family history.

Often has no obvious symptoms but can cause headaches, dizziness, shortness of breath.

Prevention: reduce salt, exercise daily, avoid stress, eat healthy food, lose weight.

Health Tips

1. Eat healthy: vegetables, fruits, whole grains, lean proteins. Reduce sugar and salt.
2. Exercise: walk, run, swim for 30 minutes daily.
3. Weight: maintain a healthy weight suitable for your height and age.
4. Sleep: get 7-8 hours of sleep every night.
5. Stress: avoid stress and anxiety, practice yoga or meditation.
6. Avoid: smoking and alcohol completely.
7. Check-ups: regular medical check-ups to detect problems early.
